DETAILED ACTION

Allowable Subject Matter

1. Claims 22-30 are allowed.

The following is an examiner's statement of reasons for allowance: The specific limitations of "means for controlling a mix of radioactive stock solution and dilution stock solution for automatically diluting the radioactive stock solution with the dilution stock solution as both the radioactive stock solution and the dilution stock solution simultaneously pass into the container" and "means for automating said radioactive dose dispensing apparatus and calculating a required dose for controlling the radioactive dose being dispensed into said container, said means for automating said radioactive dose dispensing apparatus and calculating a required dose comprising a programmable logic controller operable in combination with a radiation detector" in the combination as claimed in claim 1 are not anticipated or made obvious by the prior art of record in the examiner's opinion.

For example, Cassel (US Patent 5,911,252) discloses a dose dispensing apparatus comprising a container and a means for controlling a mixture of stock solution and dilution solution.

Matsuno (US Patent 5,039,863) discloses an apparatus for dispensing a dose of radioactive mixture in which both a source of radioactive stock solution and a container for containing a radioactive dose are shielded from radiation, Matsuno further discloses a computer and a radiation detector.

However, the prior art of record does not teach or make obvious the specific limitations of "means for controlling a mix of radioactive stock solution and dilution stock solution for automatically diluting the radioactive stock solution with the dilution stock solution as both the radioactive stock solution and the dilution stock solution simultaneously pass into the container" and "means for automating said radioactive dose dispensing apparatus and calculating a required dose for controlling the radioactive dose being dispensed into said container, said means for automating said radioactive dose dispensing apparatus and calculating a required dose comprising a programmable logic controller operable in combination with a radiation detector" in the combination as claimed in claim 1.

Conclusion
